## Making Sure Your Insulin is Still Potent

- **Presenter:** Maren Schinz, Ph.D. (Beyond Diagnostics AG)
- People living with T1D may wonder if their insulin is still good to use after temperature changes—and this company is developing a way to fix that.
- Studies in animal models of T1D have shown that injecting insulin that has lost some of its potency doesn't lower blood-sugar levels as well.
- This team developed an assay that can be paired with a smartphone to check the potency of insulin in real-time.
